

How to Publish RPL Facebook App in Your Facebook Page

Realtyna Inc.

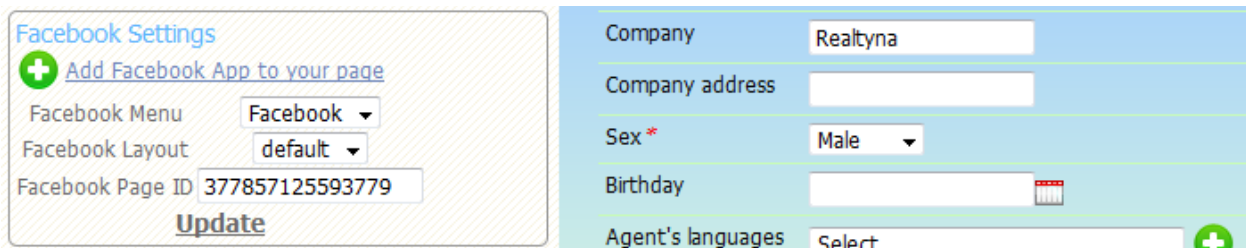

RPL has provided a solution for real estate agents to publish their properties in Facebook pages. This way, users visiting their business pages can directly take a look at the properties they listed while seeing the rest of their profiles as well. To achieve this, RPL uses a system called **Facebook Page Tab**.

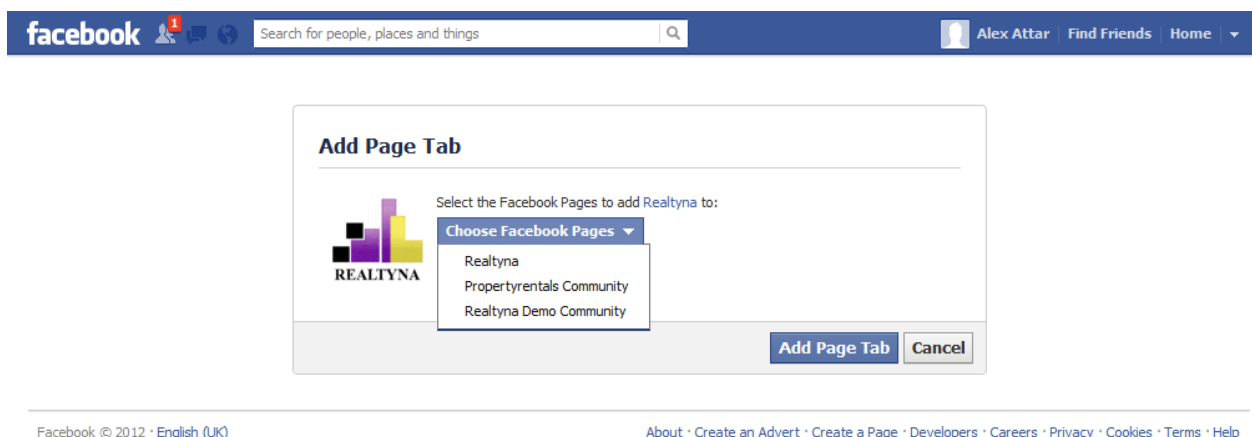

The first thing you need to do is to have a **Facebook Page** and know its page id. To create a page on Facebook, please visit [here](#). And in order to find out your page id you can go to the edit section of your page and the id is located in the address bar. Please notice the following screenshot:

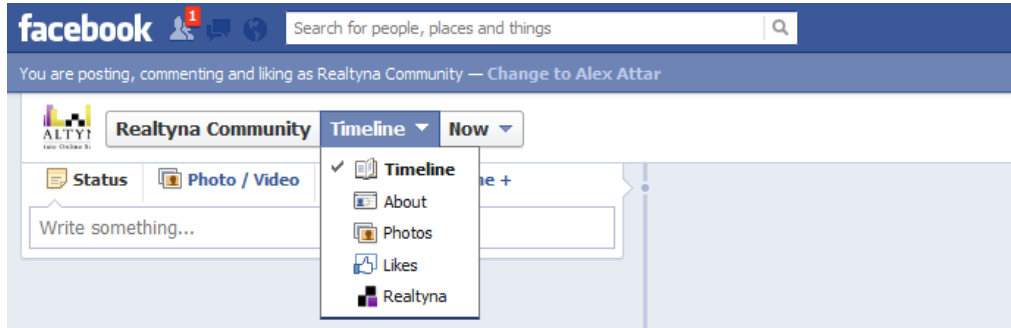

The next step is to modify the needed settings in RPL. For that, please visit **Profile Wizard** and look up for the **Facebook Settings** section.

First, you need to select the layout and navigation of your page tab. Usually, there is one default layout designed by Realtyna and other third-party customized ones. Then, please enter your page ID and click on **update**. After that, please click on "Add Facebook App to your page" and you will be navigated to Facebook which asks you which page you are willing to add the tab to.

After selecting the page and clicking on “Add Page Tab”, you’re done. Now let’s see how this page tab will look like. We all know that each Facebook page has a timeline; and a timeline menu consisting of a number of menu items like photos, info, etc. When RPL Page Tab is added to your page, another menu item will be added to the list which is indeed named like the Facebook App itself.

And when you click on this new menu item, you’ll see your and only your properties published in your Facebook Page.
